## ARA Webinar

## What is needed for more effective TD research to advance climate action?

Fostering transdisciplinary research for equitable and climate resilient development pathways across Africa: what changes are needed?

in our institutions in our funding systems in our practice

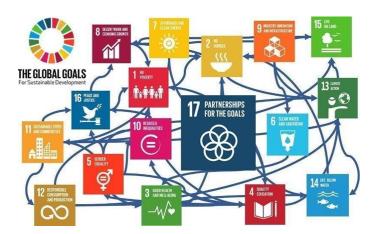

Sheona Shackleton, et al. ACDI, UCT

# Why transdisciplinary research and how does it relate to what ARA stands for?

- To achieve the transformations required to realise the Sustainable Development Goals and address Climate Action demands:
  - new ways of mobilising, weaving together, and applying knowledge
  - linking research, policymaking, planning, and action
  - working with the different needs and interests of a wide variety of societal actors
- Transdisciplinarity (TD) offers a promising, holistic approach to foster such transformations.

We live in an interconnected world, in an interconnected time, and we need holistic solutions. We have a crisis of inequality, and we need climate solutions that solve that crisis.

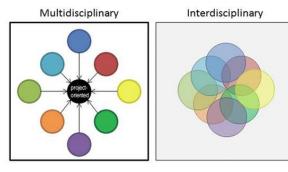

Naomi Klein

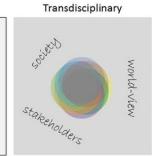

### What is TD?

 TD is a problem- and actionorientated, reflexive approach to co-producing knowledge, that draws from different disciplines, as well as the values, expertise, and know-how of non-academic actors to enable mutual learning and address societal problems (Jahn et al., 2012; Klein 2010; Noström et al., 2020).

#### Multi- → Inter- → Transdisciplinary

### What did we do?

The problem: TD is not yet well embedded in our academic institutions and disciplinary and sectoral silos continue to persist with the result that much of our SDG related research is too narrowly framed and divorced from the action space to be impactful.

What we did: We hosted, and then synthesised the learnings and insights, from **two** online social learning processes with researchers and practitioners to explore avenues to better:

- a) promote and support TD within academic institutions across Africa;
- b) resource TD for sustainable partnerships, and
- c) **strengthen TD practices** and impacts to support transformation to sustainability across diverse places and contexts.

Paper is in press: Ecosystems and People; part of a Special Issue on "Advancing transdisciplinary research on transformations in social-ecological systems in the Global South". It is an open access journal.

#### **Summit on SDGs in Africa**

Drawing on experiences from existing transdisciplinary initiatives to characterize challenges and identify key levers to pave a way forward for successful transdisciplinary research across Africa in pursuit of meeting the SDGs and Agenda 2063

3 x Pre-summit workshops

Exploring a set of six case studies

In-depth conversations with expert discussants

#### Berg-Breede Landscape Case Study

Building capacity and partnerships to support long-term transdisciplinary research for equitable and resilient landscapes in the Berg-Breede Landscape in the Western Cape, South Africa

2x

Researchers workshops

Non-academics & practitioner workshops Educators workshop

1x

Synthesis workshop with all stakeholders

Synthesized learnings and insights

## What were some of the key challenges related to improving our TD practice that emerged from our learning processes? Impenetrable science/language - lack of a

RESOURCING

Funding cycles don't support the time needed for

Remuneration not secured/fair for ALL partners

**Inflexible** funding models

Sustainability of soft funded entities and staff

INSTITUTIONAL

**Siloed** structures

**Distrust around TD** (competition for resources, inferior, too applied)

**Poorly incentivised** - criteria & metrics for scholarly success outdated

**Administration** across faculties difficult and slow (registration, funding disbursement, ethics processes

Lack of a caring/supportive environment

Lack of time to build relations, trust, reflect, learn, link outputs to actors planning/implementation needs

common framing, language and authenticity ()

Discontinuities, in project partners and actors involved

Not enough dedicated effort to deliberative team building

Power dynamics and politics

**Top-down agenda setting** still happens and linked to funding approaches – stakeholder fatigue

### What is needed to improve our practice and to improve transformative impact?

**11**Surface & engage identity politics, gender & other **power dynamics**, in relation to motivations for participating (or not) in TD work

**10** Equitably consider African- & Westernderived **ways of knowing** in co-designing research, selecting methods, tools & analytical frames

- 1 Promote TD work through annual sharing forums, news articles & awards that recognise & value TD excellence and impact
- 2 Enrol **influential champions** (e.g., traditional leaders, teachers, city councillors) to promote TD work within their networks and translate learnings into their contexts
- 3 Mandate & equip university **research offices** to coordinate & support multipartner TD initiatives

**7** Build flexibility in **finance systems** to pay project partners, research participants & knowledge brokers in a timely manner

12 Use arts-based, creative, engaging methods to create openness & safety to raise contentious issues & work through linguistic, cultural or conceptual differences

- Incentivise & reward co-supervision & mentorship arrangements across faculties & beyond the academy
- Establish mentorship schemes, exchanges, & peer-support networks to build the empathy, resilience & agility required for TD work
- Co-develop more **holistic assessment indicators** that capture scholarly, policy &
  practice-oriented outputs and levels of
  inclusivity in research
- **9** Invest in salaries & **bridging funding** for soft-funded research entities to sustain relationship building with key actors to co-design, implement & evaluate TD programmes

**8** Extend **funding cycles** to provide adequate time to build relationships, develop shared objectives, coproduce outputs & evaluate outcomes

"What we want to do is have Africa contribute to thinking in the world, not just be a place where ideas and concepts from the Global North are implemented. In order to do that, we need to adopt a pluriversal approach which allows us to theorise through Africa instead of theorising only for Africa."

research, selecting methods, tools & analytical frames

1 Promote TD work through annual sharing forums, news articles & awards that

# Thank you for listening and looking forward to hearing your perspectives

- I would like to acknowledge all my co-authors of the paper as well as the many different people who participated in the two learning processes what I have shared here is a collective summary of their rich knowledge, experience and wisdom.
- I would like to thank UCT for support for the SDG summit work and the NRF, through the Rhodes University led NRF Community of Practice in Social Learning, for funding the Berg-Breede Catchment process.

## Questions

 Please share some your experience of engaged, action or TD research whether as a researcher or a practitioner. What were some of the main challenges?

 What do you believe is needed to overcome these challenges and improve our practice? We need to see research "as a social and political process, not just discovery, this highlights the moral and ethical dimensions of working with people whose lives are affected" (Clarke et al. 2016)
